

AMENDMENTS TO THE CLAIMS

- 1 1. (Original) A method of deploying software, the method comprising the steps of:
2 a first party hosting a plurality of components in a first hosted environment;
3 receiving over a network a request to install said plurality of components into a
4 second hosted environment accessible to a second party over the network; and
5 in response to receiving said request to install, performing one or more steps that
6 include installing said plurality of components into said first hosted
7 environment in a manner that allows said second party to execute said
8 plurality of components over said network.
- 1 2. (Original) The method of claim 1, wherein the step of installing said plurality of
2 components includes creating database objects in a database server that is to store
3 data that will be used during execution of said plurality of components.
- 1 3. (Original) The method of claim 1, wherein the one or more steps further include
2 provisioning said first hosted environment for said plurality of components.
- 1 4. (Original) The method of claim 1, wherein the step of provisioning said
2 first hosted environment includes configuring a database server so that
3 said database server may be accessed by said plurality of components
4 during said execution of said plurality of components.

1 5. (Original) The method of claim 1, wherein said first hosted environment
2 and other hosted environments share other resources hosted by said first
3 party.

1 6. (Original) The method of claim 1, wherein said first hosted environment
2 was provisioned for a different version of said plurality of components
3 before receiving said request.

1 7. (Original) The method of claim 1, wherein the one or more steps further
2 include said second party interacting with a development tool over said
3 network to develop said plurality of components.

1 8. (Original) The method of claim 7, wherein the steps further include other parties
2 interacting with said development tool over the Internet to develop other pluralities of
3 components hosted by said first party.

1 9. (Currently Amended) A method of deploying software, the method comprising the
2 steps of:
3 receiving over a network a request to install a plurality of components into a hosted
4 environment accessible by ~~said first~~ a party over the network; and

5 in response to receiving said request to install, performing the following steps:
 6 installing said plurality of components into said ~~first~~ hosted environment in a
 7 manner that allows said ~~first~~ party to execute said plurality of
 8 components over said network, and
 9 wherein installing said plurality of components includes creating database
 10 objects in said ~~a~~ database server.

1 10. (Original) The method of claim 9, wherein the steps performed in response to
 2 receiving said request further include provisioning said database server.

1 11. (Original) A computer-readable medium carrying one or more sequences of
 2 instructions for deploying software, wherein execution of the one or more sequences
 3 of instructions by one or more processors causes the one or more processors to
 4 perform the steps of:
 5 a first party hosting a plurality of components in a first hosted environment;
 6 receiving over a network a request to install said plurality of components into a
 7 second hosted environment accessible to a second party over the network; and
 8 in response to receiving said request to install, performing one or more steps that
 9 include installing said plurality of components into said first hosted
 10 environment in a manner that allows said second party to execute said
 11 plurality of components over said network.

1 12. (Currently Amended) The computer-readable medium of claim 11, wherein the step
2 of installing said plurality of components includes creating database objects in a
3 database server that is to store data that will be used during execution of said plurality
4 of ~~components~~ components.

1 13. (Original) The computer-readable medium of claim 11, wherein the one or more steps
2 further include provisioning said first hosted environment for said plurality of
3 components.

1 14. (Original) The computer-readable medium of claim 11, wherein the step
2 of provisioning said first hosted environment includes configuring a
3 database server so that said database server may be accessed by said
4 plurality of components during said execution of said plurality of
5 components.

1 15. (Original) The computer-readable medium of claim 11, wherein said
2 first hosted environment and other hosted environments share other
3 resources hosted by said first party.

1 16. (Original) The computer-readable medium of claim 11, wherein said
2 first hosted environment was provisioned for a different version of said
3 plurality of components before receiving said request.

1 17. (Original) The computer-readable medium of claim 11, wherein the one
2 or more steps further include said second party interacting with a
3 development tool over said network to develop said plurality of
4 components.

1 18. (Original) The computer-readable medium of claim 17, wherein the steps further
2 include other parties interacting with said development tool over the Internet to
3 develop other pluralities of components hosted by said first party.

1 19. (Currently Amended) A computer-readable medium carrying one or more sequences
2 of instructions for deploying software, wherein execution of the one or more
3 sequences of instructions by one or more processors causes the one or more
4 processors to perform the steps of:
5 receiving over a network a request to install a plurality of components into a hosted
6 environment accessible by ~~said first~~ a party over the network; and
7 in response to receiving said request to install, performing the following steps:

8 installing said plurality of components into said ~~first~~ hosted environment in a
9 manner that allows said ~~first~~ party to execute said plurality of
10 components over said network, and
11 wherein installing said plurality of components includes creating database
12 objects in said a database server.

1 20. (Original) The computer-readable medium of claim 19, wherein the steps performed
2 in response to receiving said request further include provisioning said database
3 server.
